suspended
bed

Whether your bed is a haven of peace or a place to let loose, the Suspended Bed is designed to provide an adaptable, fun and functional environment no matter what your requirements

Why suspend?

Originally conceived to limit the effects of pitching and wave chop on yachts, the Suspended Bed - now adapted for domestic purposes, is a bed that looks good and feels good. The design is unique, simply made adjustments allow you to personalise the feel of your bed - complimenting your environment and preferences.

The Suspended Bed moves silently, it reacts' to your movements with a forgiving counter reaction, this increases comfort. Both external vibrations and those generated by you are absorbed by the cord that suspends you, making it quieter....for you and others.

A bed of two frames...

The inner frame is suspended from a stable outer frame and stabilised by four dampers. These shock cord loops ensure that the bed remains stable and level. Simply made adjustments change the tension within these loops, radically altering the feel of the bed, from firm and controlled to free floating and fun.

Materials...

The inner and outer frames hand crafted from stainless steel tubing. The headboard, mattress retainer and feet are made of European Oak. The shock cord, that suspends the inner frame, is made from natural rubber strands with a durable protective sheath.

Sizes

The suspended bed is available in both King (152 x 250cm) and Super King (182 x 250cm) sizes which accommodate mattresses of 150 x 200 and 180 x 200cm respectively, extra long versions can also be made to order. New headboard and rope colour options will be added over the coming months

Where to see it... Buy it

Following its launch within the London Design Festival, exhibiting at both 100% Design and Designers Block, suspended will be available in the UK from Blend Design Store, Brighton. Tel 01273 739 111 and www.completely modern.com with other retail outlets to follow. Formfollows welcomes all enquiries from both Trade and Press.
